

## Logparser

1.

**parnaseo\_u\_ex1504.log:**

Para buscar los elementos estructurales (gif,jpg,css,js):

```
logparser -i:iisw3c "SELECT count(*) FROM parnaseo*.log WHERE  
cs-uri-stem like '%.gif' or cs-uri-stem like '%.jpg' or cs-uri-  
stem like '%.ico' or cs-uri-stem like '%.js' or cs-uri-stem like  
'%.css'"
```

Para buscar contenido (html):

```
logparser -i:iisw3c "SELECT count(*) FROM parnaseo*.log WHERE  
cs-uri-stem like '%.html'"
```

Los resultados son 90618 para elementos estructurales y 27719 para contenido.

**ci2\_access.log**

Para elementos estructurales:

```
logparser -i:nasa "SELECT count(*) FROM ci2*.log where Request  
like '%jpg%' or Request like '%gif' or Request like '%css%' or  
Request like '%js%'"
```

Y para contenidos:

```
logparser -i:nasa "SELECT count(*) FROM ci2*.log where Request  
like '%htm%'"
```

Obteniendo unos resultados de 31647 para elementos estructurales y 44 para contenidos.

2.

**parnaseo\_u\_ex1504.log:**

```
logparser -e:10 -i:iisw3c "SELECT cs-uri-stem into salida2iisw3c.txt FROM parnaseo*.log where cs-uri-stem like '%.htm'"
```

**ci2\_access.log**

```
logparser -i:ncsa "SELECT Request into salida2ncsa.txt FROM ci2*.log where Request like '%.htm%'"
```

La salida se encuentra en los archivos salida2\*.txt.

3.

```
logparser -i:iisw3c "select top 10 cs-uri-stem,sc-bytes,cs-bytes from parnaseo*.log where cs-uri-stem like '%.pdf'"
```

4.

```
logparser -i:iisw3c "select top 10 cs-uri-stem,count(*) As hits from parnaseo*.log where cs-uri-stem like '%.pdf' group by cs-uri-stem order by hits desc"
```

5.

Para ver los tiempos:

```
logparser -i:iisw3c "select cs-uri-stem,time-taken from  
parnaseo*.log where cs-uri-stem like '%/memorabilia/%.pdf'"
```

Para ver la media de todo:

```
logparser -i:iisw3c "select avg(time-taken) from parnaseo*.log  
where cs-uri-stem like '%/memorabilia/%.pdf'"
```

6.

```
logparser -i:iisw3c "select distinct cs-uri-stem from  
parnaseo*.log where cs-uri-stem like '%.htm' and sc-status=404"
```

7.

```
logparser -i:ncsa "select distinct Request from ci2*.log where  
Request like '%.htm' and StatusCode=404"
```

No se encuentran links rotos.

8.

```
logparser -i:iisw3c "select distinct cs(Referer),cs-uri-stem from  
parnaseo*.log where cs-uri-stem like '%.htm' and sc-status=404"
```

9.

```
logparser -i:ncsa "select statuscode,count(*) into salida9.csv  
from ci2*.log group by statuscode"
```

La salida de datos está en salida9.csv.

10.

```
logparser -i:nrsa "select statuscode,  
TO_INT(MUL(propcount(*),100)) into salida10.csv from ci2*.log  
group by statuscode"
```

Los datos están en salida10.csv.

11.

```
logparser -i:iisw3c "select reversedns(c-ip) into salida11.txt  
from parnaseo*.log where cs-uri-stem like '%Lemir%' and c-ip like  
'147.156%'"
```

La salida completa está en salida11.txt.
